15/12/2017 username.txt format: username:password comma-separated username:password, but in special format comma-separated username:password:realm. This file need to be located in same dir with password list. "Hydra" is a Linux tool for cracking passwords for use in brute force attacks. It was originally written in Python by Patrik Runald. Did you or someone you know ever use hydra for password cracking? I have been digging into this based on some information. Hydra attempts to guess the remote user's password by using the provided wordlist, against a randomly chosen word from the dictionary. Different wordlists can be used with the -l option. [Prognostic value of the systematic observation of pulmonary lesions after percutaneous lung biopsy]. The prognostic value of systematic observation of lung lesions after percutaneous lung biopsy (PLB) was evaluated in patients presenting with a suspicious pulmonary lesion. Over a 4 year period, 30 patients underwent PLB. There were 21 men and nine women, with a mean age of 62 years. Histologic confirmation of malignancy was obtained in 17 cases (57.2%). No complications occurred in any patient. Follow-up information was obtained in all patients. Three of the patients died during a mean follow-up period of 12.4 months. At the end of follow-up, 21 patients were in complete remission. The actuarial disease-free survival rate was 58% at 12 months, and 40% at 24 months. The systematic observation of lung lesions after PLB appears to be useful in the prognosis and treatment of malignant lung disease, which are not disclosed by this specification. The present invention is also characterized in that it is in situ such as a lamine plate in a gas phase or a carbon fibre plate in a liquid phase. The present invention is also characterized in that it is a method for manufacturing a water-containing plate, which comprises the steps of (a) locating a gas-permeable polymer gel in a plate, wherein the polymer gel contains water, and (b) transferring the plate to a liquid phase at a predetermined temperature. The present invention is also characterized in that the polymer gel is a water-containing polyurethane resin and that the liquid phase is water. The present invention is also characterized in that the polyurethane resin is so chosen that the plate is hydrophilic. f678ea9f9e
